

IFSEC 2009

Again Silvertel was very pleased at the interest in their products demonstrated at the IFSEC 2009 show. The security industry is very interested in what PoE and PoE+ devices can provide them. Silvertel has now gained a firm footing in supplying products used in the security market. We showed many examples of our customers' products which included cameras, door access systems, RFI tag readers and video servers.

The new product ranges introduced at the show included our Ag102 advanced battery charger which enables the full life time of Sealed Lead acid batteries to be realised. This will save cost to the customer and help the environment.

For an up to date list of our products and data sheets please visit our website at:
